## HISTORICAL PLACES IN FARIDKOT

### QILA MUBARK

The fort with its impressive architecture still adorns the city of Faridkot. Its foundation is believed to have been laid by Raja Mokalsi. Raja Hamir Singh renovated it and got it extended. Later ruler Raja Bikram Singh and Raja Balbir Singh got constructed many new buildings. It housed the royal Palace, Tosha Khana, Modi Khana & Treasury Buildings. There is a garden within the four walls of the fort. All the buildings are very well built and well furnished.

### RAJ MAHAL

This Palace was built during the reign of Maharaja Bikram Singh during 1885-1889 under supervision of the, then Crown Prince (Later Maharaja) Balbir Singh, who incidentally was the first to move in and start living in it. Spread over nearly 15 acres, it presented a magnificent look with French design, dominating grassy lawns a mid semi desert area of the State. Its entrance called "Raj Deori" – itself is a heritage building of a vintage and now houses Balbir Hospital.

### DARBAR GANJ

This beautiful bungalow is a well laid out garden palace. All the rooms are finished in the most modern style. The guests from the sisterly states used Darbar Ganj for stay. The building has now been converted into Circuit House.

## INTRODUCTION

Over the past few decades life sciences have evolved in to a modern technology without which medical progress would be scarcely imaginable. Life science research plays a crucial role both in elucidation of the molecular causes of the disease and in the development of new diagnostic methods and better targeted treatments. Life science will be the foundation of tomorrow's medicine and a central element in future business and economy development. The knowledge generated by life science will impress 21<sup>st</sup> century in ways we most likely are unable to foresee today. However, most of the noble prizes are being awarded to medical sciences as compared to life sciences. Another issue is the major funding is fluxed towards some selected life sciences projects like Human Genome Project. This conference will provide decision makers with a clear picture of the whole landscape and enable better strategic decisions to be made. A strong understanding between both the domains needs to be established to ensure that both research in life science and medical sciences continues to grow and operate in the coherent way. This conference would reveal the importance of a clear articulation of the strengths and requirements of both the domains and how life science and medical science complement each other to faster innovative and quicker research to answer potential problems.

## OBJECTIVES

To make the medical scientists/basic scientists aware of:

1. Advanced techniques that can help in better diagnosis, prognosis and treatment of patients.
2. Opportunities in medical sciences research.
3. Benefits of integrated research in drug development.
4. Role of Ayurveda and Pharmacy in medical sciences.
