STRENGTH:

Lead by setting examples. Coordinated and improvised the cooperation in education and training amongst various countries of Asia and other continents. Drive and motivate goal oriented, set tasks, achieve targets, meet deadlines, methodically and innovatively. Exemplary work ethics, integrity and loyalty. An able negotiator and persuader. Conceptualized, Drafted and Chaired Rs3000 Crore institutional Redevelopment project under National Infrastructure Pipeline(NIP), in five year vision document of Govt. policy. Established a new medical college and started many new departments from scratch, introduced simulation and competency based (CBET) uniform academic curriculums and training programs for the institute, university, MoH&FW, ICMR, various academic associations. Active contribution over four decades in the planning and implementation of various National, State and Institutional program. Accolades and awards occurred and bestowed upon repeatedly by National, International academic, scientific and research organizations.

VISION:

With the background of extensive exposure and experience of international academic planning, remaining at the helm of affairs of teaching institutions at record pace and zeal which is required for nurturing the mission of young & evolving university. The educational institute of the stature needs to address all the three components i.e. education, educational technologies and research & development, in the integrated approach both for trainee and trainer. I envisage the growth of the institution to cater the need of the member institutions and through this dimension to further collaborate with the rest of the country & world. Advent and integration of technology should bridge all distances for a cohesive flagship research-oriented program. Meticulous planning shall be done to augment the efforts of pioneers who established the concept to reality. Hard fact shall remain that in the competitive world of acquiring knowledge, experience and skills, intelligence, diligence and adopting the right methodology proves to be the golden route to the excellence of the institute or its products. My experience of leading from front of social and academic associations, working on large projects of national importance and policies, nurturing of established institutions to new heights and creation of concepts, development and redevelopment and augmentation of resources and facilities gives me vision to contribute to my best to upgrade the already established institution / university, if the opportunity occurs to me.
